

SUMMARY

Data Science professional with more than 4 years of hands-on experience in solving machine learning problems in Classical Machine Learning and Natural Language Processing (NLP) domain.

EDUCATION

- **Indian Institute of Technology, Delhi** June 2014 – July 2018
B.Tech in Civil Engineering

WORK EXPERIENCE

- **Naukri.com** Feb 2022 - Present
Data Scientist
 - **Job Description (JD) Parser:** Built JD Parser on Naukri Jobs to extract skills and designation from Job Description with neural network based Named Entity Recognition model. The NER model was trained on hand annotated data using thousands of Job Descriptions across Naukri ecosystem.
 - **Job Department Prediction Model:** Developed Department Prediction Model (IT/HR/Finance/Sales) for Naukri Jobs using Job Designation and Skills. The problem was modelled as a Sentence Classification problem with 37 different departments as outputs.
 - * Able to beat previous Naive Bayes Model from 66% accuracy to 80% accuracy using NN based approach.
 - **Job Seeker Skills Ranking Model:** Built Skill Ranking Model for Naukri Job Seekers to rank all the skills extracted from his/her profile. Skills mentioned in Jobs for which Job Seeker was shortlisted on were used to label each skill as positive or negative. A binary classifier was then trained to predict relevance score for each skill using only content based features as input.
 - * Able to improve AU-PRC score from 45% in earlier model which used various heuristics to 60% AU-PRC using Random Forest based approach.
- **Paytm** Dec 2018 - Feb 2022
Data Scientist
 - **Merchant Look-Alike Model:** Developed a Binary Classifier to predict merchant like behaviour probability in Paytm's customer base in order to target them to onboard as merchants. Used transactional behaviour of customers to predict if they qualify for the characteristics only merchants exhibit. This was developed using Random Forest Model

KEY ACHIEVEMENTS

- IIT JEE AIR 1867
- KVPY AIR 326

RELEVANT COURSEWORK AND SKILLS

- **Courses:** Linear Algebra, Probability and Statistics, Calculus, Machine Learning, Deep Learning, Natural Language Processing, Data Structures and Algorithms
- **ML Algorithms:** Natural Language Processing, Neural Networks and Deep Learning, Decision Trees and Random Forest, Word2Vec, Dimensionality Reduction, Attention Models
- **Programming Languages and Libraries:** SQL, Python, Pytorch, Pyspark, Pandas
